Project proposal:

Workspace discovery application.

Description:

Freelancers always need to find new projects or tasks that they can work upon. They first need to find the company that offers them the projects in the field they are interested to work in. The proposed system will allow the freelancer to enter his details and interests and will display the names of the company or any other organizations willing to offer some projects in his area of interest. Also after finding a proper project they need a workspace where they can work peacefully. Often freelancers are having trouble finding a place where they can work as many of the cafes are crowded at the peak hours of the day. The application allows the users to search for a workplace by displaying a number of options where they could work and also the timings when they can go and grab a seat.

Core Features:

The basic functionality of the application is to find out the projects which suit the interests of the freelancer. This task will have the following features:

1) Login / Sign up:

A freelancer can create an account on the application by filling in all his details and interests. He would be given an option to select the preferences if he has multiple areas of interests. Every time the user logs in into the system he would be able to see a list of opportunities available in his field of interest. The user can change or update his interest anytime he wants.

2) Searching:

The user can search for projects or opportunities in other fields as well by just searching in the homepage which will be having a list of all the available projects along with their details and minimum requirements.

3) Filter:

The search can be filtered by selecting multiple areas of interest.

4) Dashboard:

Functionality where user can keep track of all his activities including the opportunities where he has applied and the workplace details where he has booked the room to do his work.

Another functionality is to display the available workplace along with the timings at which they can be visited. This will be having the following features:

i) Login/ Sign up / Continue as Guest:

The user can log into the system or create a new user account. We can also give him the option of just browsing through the available workplace option by continuing as guest.

ii) Selecting kind of workplace:

There are different kinds of workplaces like cafes, coffee shops, co working spaces, libraries, museums and the user can select if he has any preference among these options.

iii) Display the workplaces:

The list of workspaces will be displayed along with their opening and close timings.

Extra Features:

The additional features that can be included are:

1) Email notifications and text Alerts:

The user will be notified as and when new opportunities are posted by the company. The job listings posted will be based on his interests or any particular company with which the user specifically wants to work with.

2) Reviews:

The user can share their experience and provide ratings for any company they have worked with. They can express the pros and cons of that institution or the projects on which they have worked.

3) Reservations:

This is the functionality to make reservations for the workplace.
